

# 1<sup>st</sup> EAAP Conference on Artificial Intelligence 4 Animal Science

**Use of sensors, vision technology and AI to assess animal welfare, carcass and meat quality in a pig production chain and processing plant**

*R. Klont, E. Kurt and M. Bouwknecht*

4<sup>th</sup> June 2025

Food that **Matters**

# 100 years ago

a group of Dutch farmers realised they were stronger together and founded Vion.

# Today:

We work with over  
**11,000 employees**

engage over  
**55,000 farmers**

feed over  
**100 mln. people**

and have a revenue of  
**5.3 billion euros**

# Our ambition is to become the most sustainable meat & plant-based company in the industry by 2030

## Vion focuses on entire animal production chain

**Improving sustainability requires collaboration across the chain**

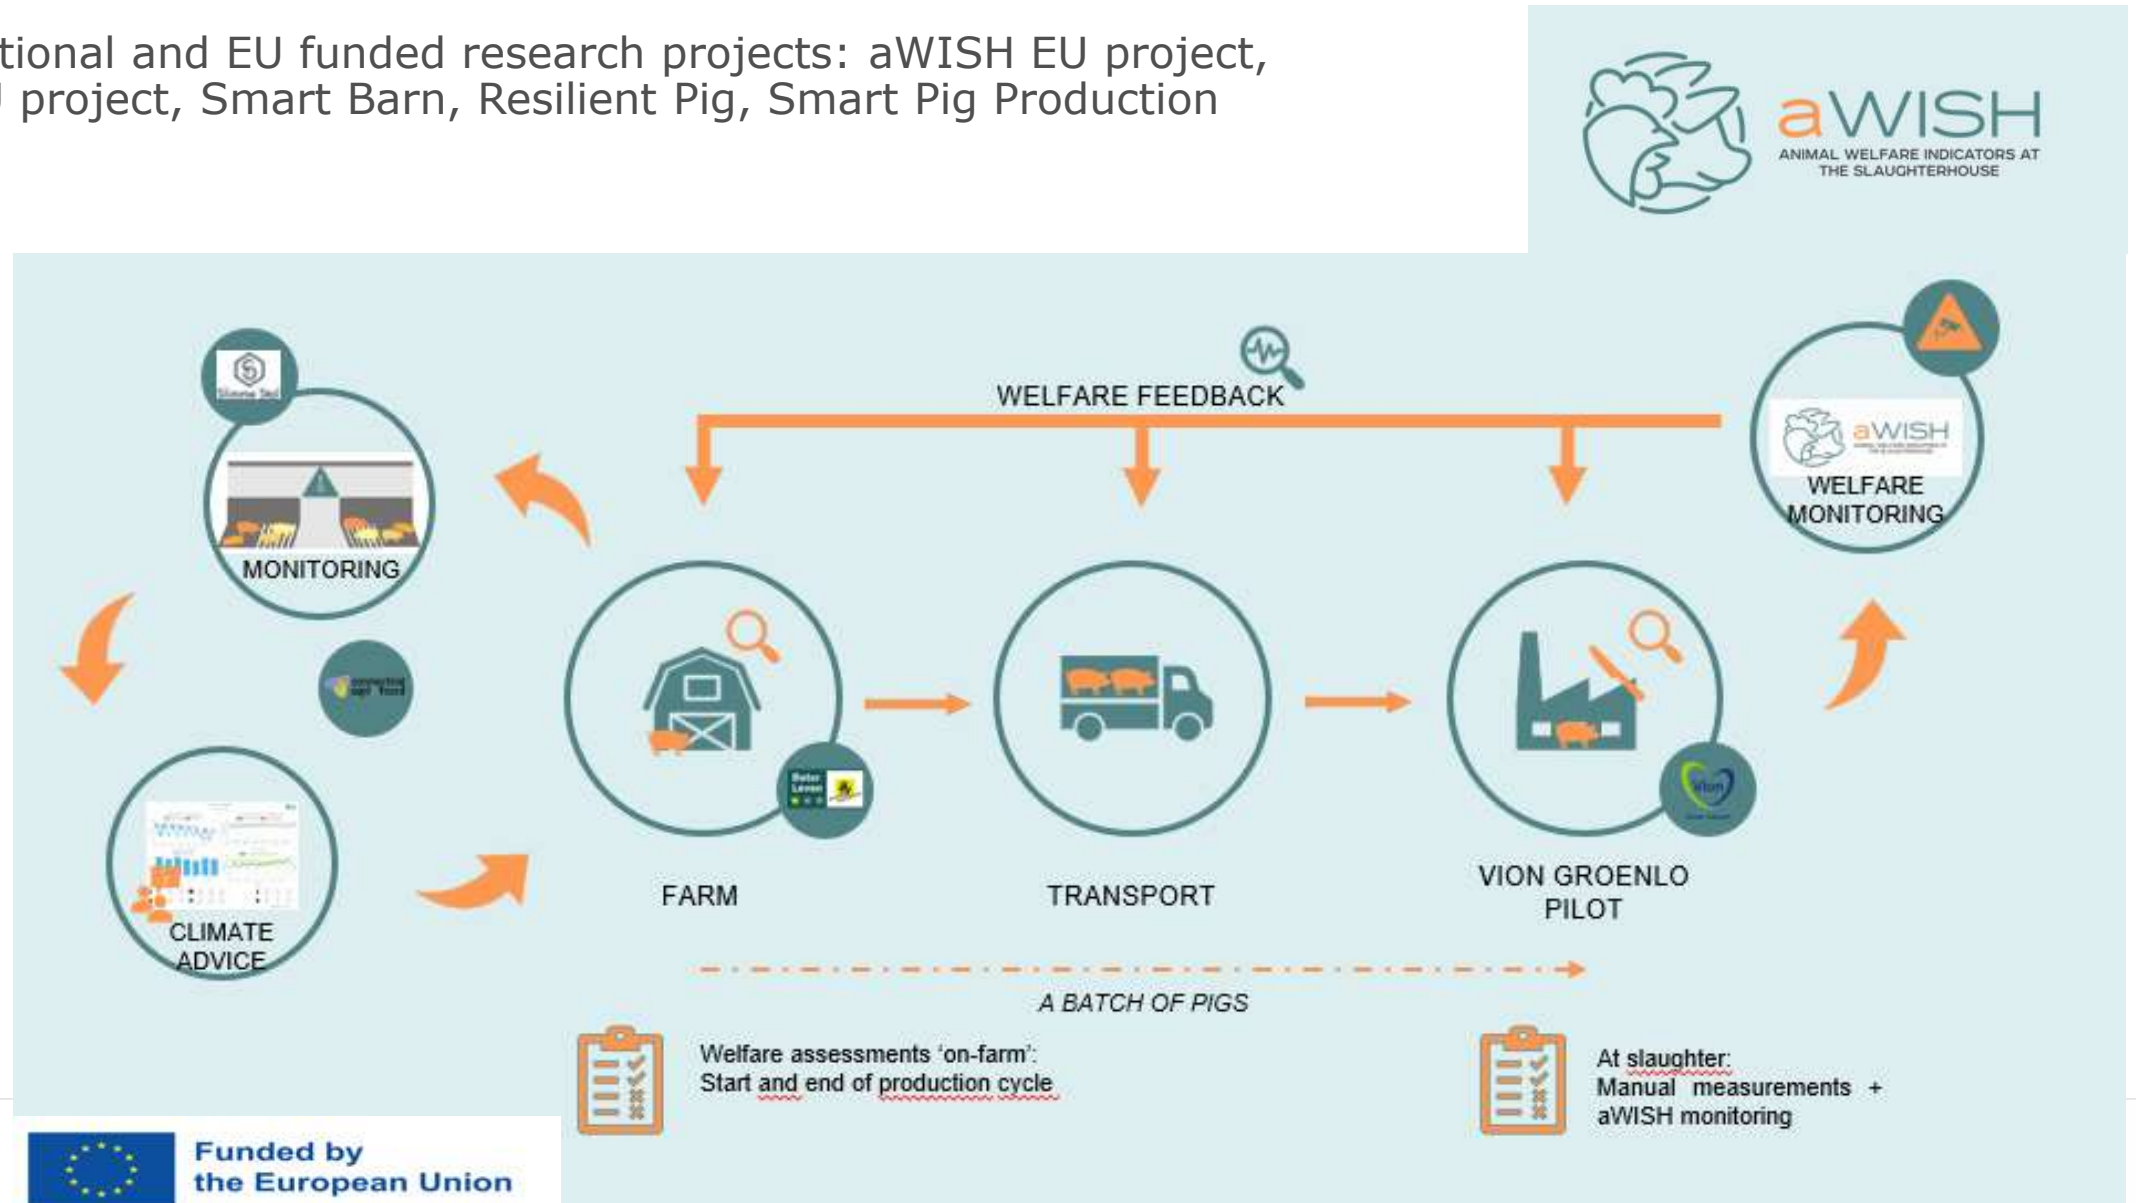

**Improving animal welfare requires collaboration across the chain**

**Improving efficiency and valorisation requires collaboration across the chain**

# Snapshot of vision, sensor and AI technology use across Vion's production chain

Multiple national and EU funded research projects: aWISH EU project, Tailscan EU project, Smart Barn, Resilient Pig, Smart Pig Production Chain, etc.

# Pig behaviour and health analysis by cameras on farm

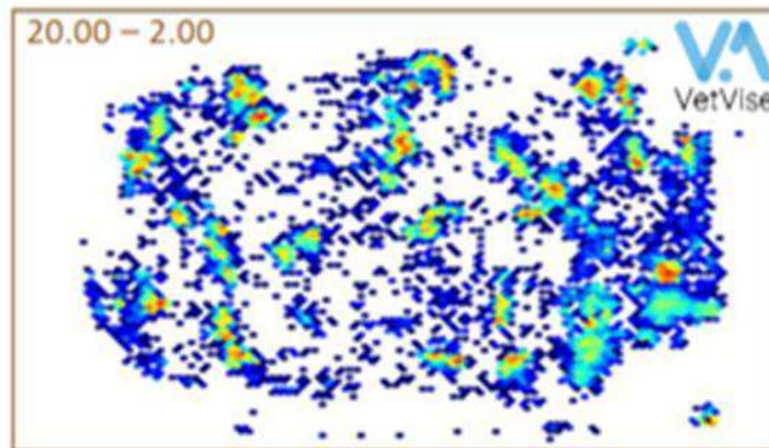

Af en toe varken aanwezig

Continu varken aanwezig

De meeste dieren zijn rond de voerbak (rechtsonder in het hok).

In het midden van het hok minder frequent dieren aanwezig.

# Climate sensor to monitor environment - Intelligent Barn

Intelligent Barn  
Your insight

Real time data collection:

- Weather data
- Ventilation
- Vision camera
- Coughing monitor

Secured Data-analysis

Secured Data

Dashboard for users

LoRa Gateway

# Technologies Overview - Vion

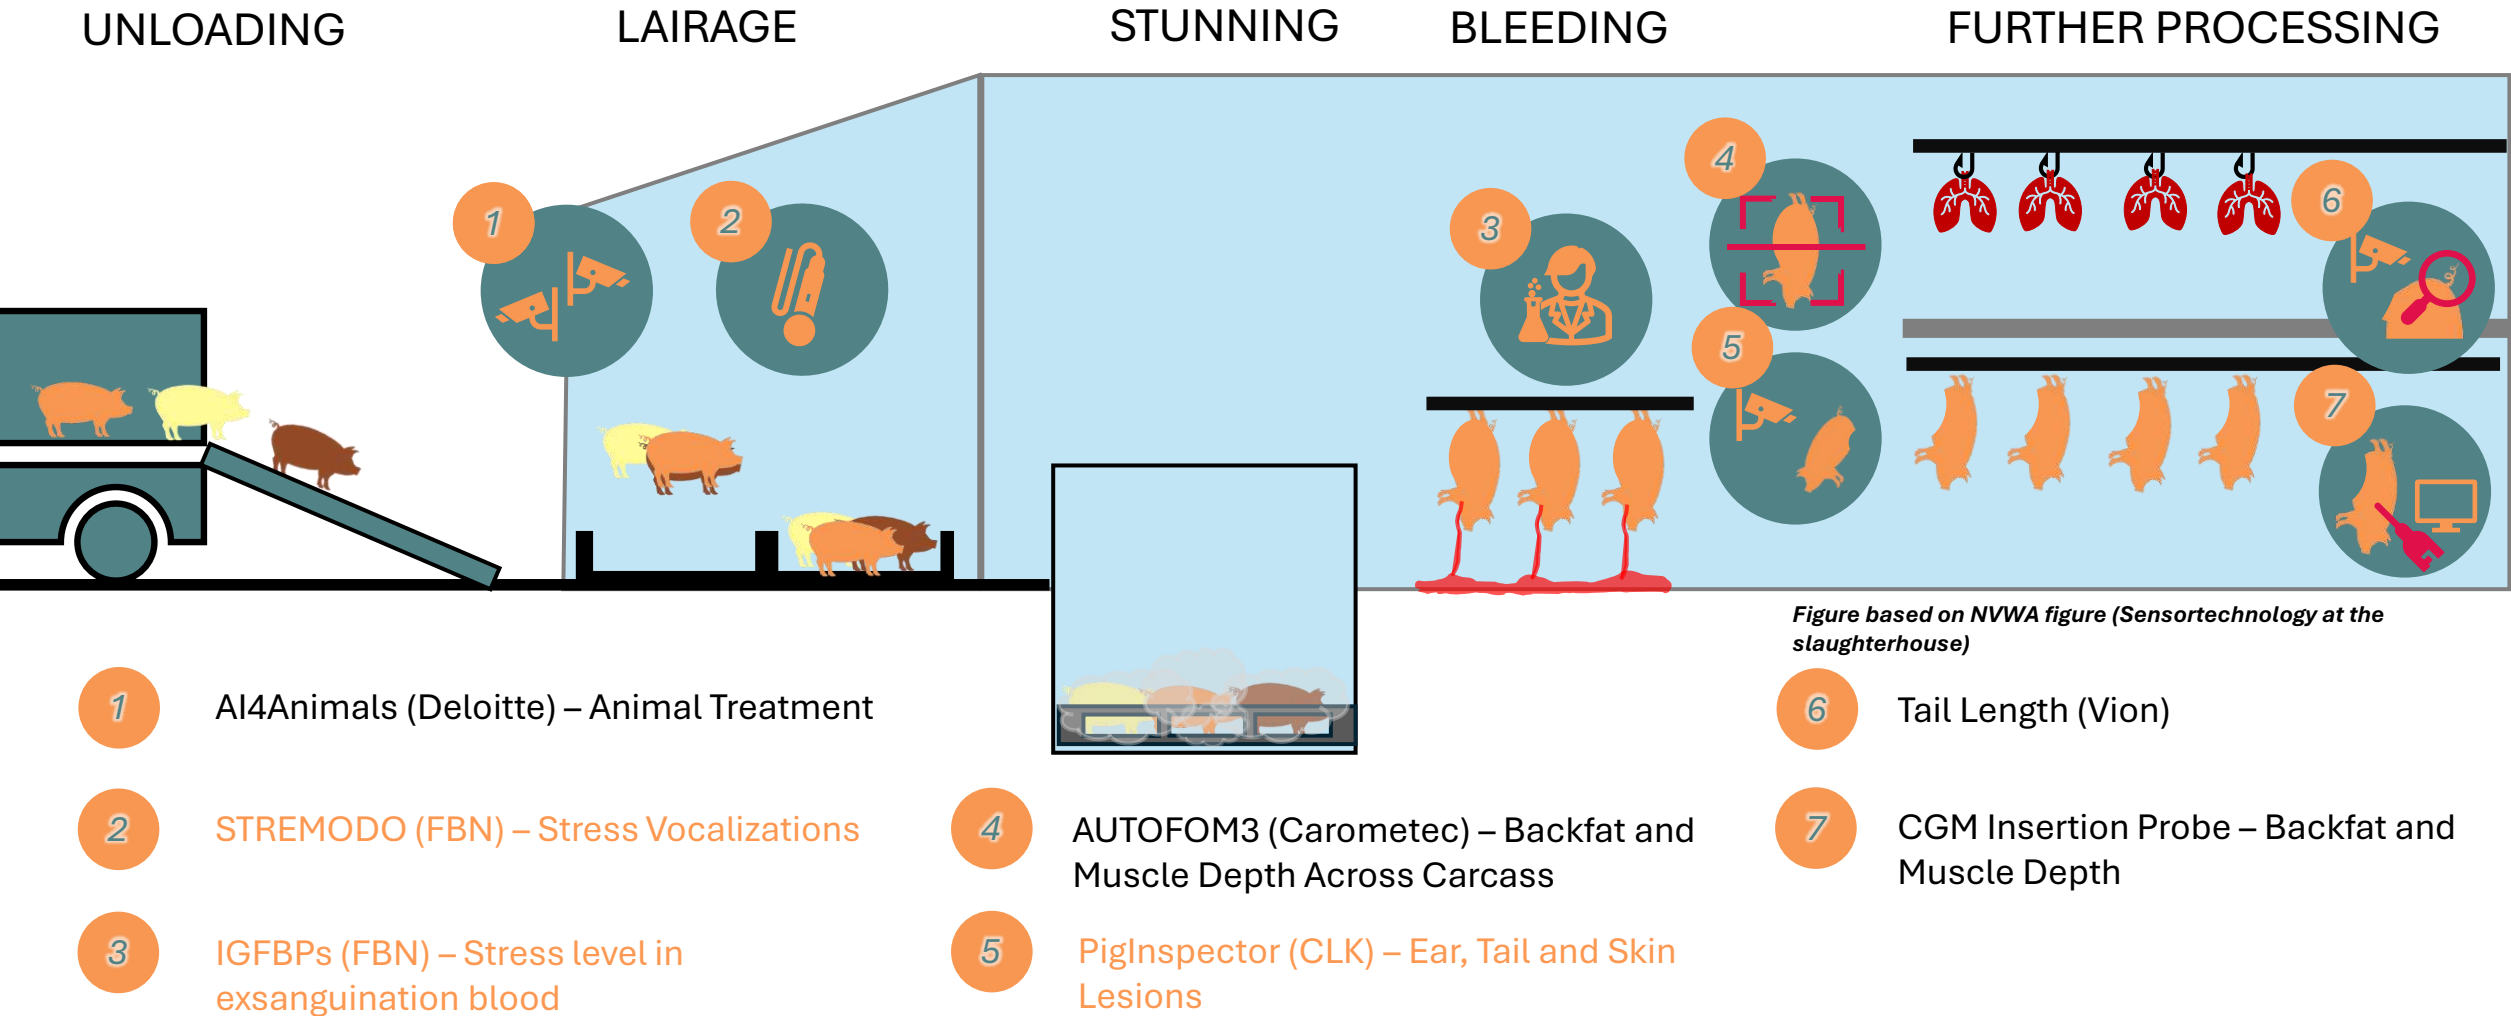

Figure based on NVWA figure (Sensortechnology at the slaughterhouse)

# At unloading: Vision system in the lairage (AI4Animals – Deloitte)

## How it works

### 1 AI solution - detections

The AI4A algorithm detects animals, people, and objects and how they interact

### 2 AI solution – movement heatmaps

Images are translated into movement heatmaps to detect potential handling issues

### 4 Dashboard - trend reports

AI4A includes trends reports outlining deviations over time and per slaughterhouse

### 3 Dashboard - deviations list review

AI4A selects and aggregates all video recordings containing potential deviations to be reviewed

New: counting pigs from truck

# Virtual Reality - Animal Eye Simulator

*Visualise how cows and pigs are likely to perceive their environment*

## Optimizing lairage and driveways

- Sensitization employees in their way of working
- Adapt light to limit contrasts or improve light/ dark transitions
- Adapt infrastructure, e.g. change colour of walls, paddels, etc. to encouraging independent forward movement

Erstellt mit dem  
Tieraugen-Simulator  
der C.O.M. GmbH

# Pilots • Pilot 1

## Stremodo Sound / Motion Sensor in cooperation with FBN Dummerstorf

## Lactate and stress protein measurements in blood after stunning

## Reference lactate analysis

## NIR signal reflection

## Raman signal

[illegible]

# Tail length and lesion measurements

## Pig Inspector

ID 325068

ID 325067

ID 325066

Funded by  
the European Union

# In line hyper spectral camera fat quality measurements

# Yield and meat quality measurements

Combining data from the production chain and further processing stage to predict yield, meat quality and optimal carcass valorization

# Conclusions

- Sensor technology and AI deep learning developments are rapidly leading to new applications across our animal production chains
- Animal welfare, waste reduction, product quality and yield are greatly supported via these innovative technologies
